RE: EPBC 2025-10403 - Hail Creek Open Cut (HCOC) – Eastern Margin Extension

Dear Kelli,

I am writing to advise you of a minor error in the Project Description for the Hail Creek Eastern Margin Extension Project (the Project) regarding the misdescription of ROM and product coal tonnes.

We have recently become aware that the *Project Description* describes an increase production over the mine life by 24.0 million tonnes (Mt) ROM. In fact, the 24.0 Mt figure relates to product coal (comprising 16.6 Mt of coking coal products and 7.4 Mt of thermal coal products), rather than ROM.

The error has also been identified in Section 1.1 (page 1) of Attachment A – EPBC Environmental Assessment Report (Revision 3.0, 17 December 2025).

In reading the above material, we ask that the ROM tonnage of 24 Mt is read as product coal tonnage of 24 Mt.

We confirm that despite the error which was inadvertently included in the *Project Description* and *EAR*, the correct inputs have been applied in all technical assessments for the Hail Creek Eastern Margin extension project (including estimating associated greenhouse gas emissions), and the error is a misdescription only.

Yours faithfully,

Alan Shaw
